Goals	<ul style="list-style-type: none"> - Get in touch with Kubernetes, Docker - Everyone feels comfortable working with it - Earning something - Deliver working application - Satisfy the client - We succeed as a team or we fail as a team
Meeting norms	<ul style="list-style-type: none"> - Create meeting protocol, maintainer is the current release manager - Zoom for Teammeeting 12:30 - Dont use Zoom Chat, instead use Mattermost channel Teammeeting - Stay within meeting schedule, dont extend meetings heavily
Working norms	<ul style="list-style-type: none"> - Help each other - Main branch is runnable - No direct pushes to main - Code is reviewed by other software developers - Everyone picks up open active topics proactively - Every developer has to do at least 1 story point per sprint
Coordination norms	<ul style="list-style-type: none"> - Decline meetings if you're not able to join - Inform team if you're late - Use comments on GitHub issues for coordination on user stories
Communication norms	<ul style="list-style-type: none"> - Mattermost for team internal communication - We interact politely and respectfully with each other - Everyone can always speak up and state their mind - In case of problems talk to each other - Cameras are always on with happy faces
Consideration norms	<ul style="list-style-type: none"> - Less tasks for people with exams - Majority vote for hard decisions - Every opinion is weighted equally
Cont. improvement norms	<ul style="list-style-type: none"> - Perform retrospective after sprints - Talk openly about what went wrong respectful manner
Rewards	<ul style="list-style-type: none"> - Good sprints give research budgets which is spent on research project related stuff
Sanctions	<ul style="list-style-type: none"> - Sad smileys for late people

Product Vision	Project Mission
<p>Our vision is to create a tool that empowers DevOps teams to manage their Kubernetes clusters with ease, providing them with a single platform for inventory visibility, deep insights, real-time analytics, and intelligent monitoring and alerting. With KIT, teams can optimize their resources and streamline their operations, resulting in faster deployment times, better performance, and happier customers.</p>	<p>Product Mission for KIT: Simplifying Kubernetes Management and Monitoring for DevOps Teams</p> <p>At KIT (Kubernetes Inventory Taker), our mission is to simplify Kubernetes management and monitoring for DevOps teams. We want to provide a user-friendly tool that gives you a clear, real-time view of your Kubernetes resources, from deployments and pods to containers, so you can easily manage and optimize your infrastructure.</p> <p>Here's what we're all about:</p> <ul style="list-style-type: none">- Inventory Visibility: We'll provide you with a comprehensive view of your Kubernetes inventory, showing you the state, health, and configuration of your deployments, pods, and containers in a single, easy-to-navigate interface. No more complex logs or guesswork - we'll make it simple and intuitive for you to understand your resources.- Insights and Analysis: We'll help you gain deep insights into your Kubernetes resources with powerful analytics and analysis. Get real-time information on resource utilization, health status, and configuration changes, so you can quickly identify and resolve issues, track changes over time, and optimize your resources for better performance.- User-friendly Web Frontend: We believe in making KIT easy to use and visually appealing. Our web frontend is designed to be user-friendly and responsive, with

Term	Definition
KIT	Project Name short for Kubernetes Inventory Taker

Sprint	Theme	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
Release							
	Total			79	49	77	
Sprints							
1	Project kick-off	Get in touch with the team, project and AMOS		0	79	0	77
2	Project Setup	Create application architecture and setup project components		21	79	22	77
3	Application Domain Modelling	Model the application domain as well as create drafts for the UI		19	58	17	55
4	Application Domain Model Implementation & CICD architecture	Implement the first components of the application domain and prepare CICD pipeline		23	39	23	38
5	CICD, Testing and UI design			16	16	15	15
Features							
1	Project kick-off	Get in touch with the team, project and AMOS					
			Create & agree on team contract				
			Initialize planning documents				
			Fill happiness index				
			Design team logo				
			Submit team T-Shirt size preference				
2	Project Setup	Create application architecture and setup project components					
			Initialize base Website	8		8	
			Initialize database	2		1	
			Initialize proxy container	3		5	
			Introduction to used technologies	8		8	

Sprint	Theme	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
			Create software architecture description				
			Initialize software bill of materials				
3	Application Domain Modelling	Model the application domain as well as create drafts for the UI					
			Create wire draft for UI	5		8	
			Design database scheme	8		5	
			Apply database scheme to database	3		1	
			Initialize project docker-compose	3		3	
4	Application Domain Model Implementation & CICD architecture	Implement the first components of the application domain and prepare CICD pipeline					
			Create base implementation for resource information collection	5		5	
			Create base container detail page	8		8	
			Create coding guidelines	5		5	
			Decide on CICD architecture	5		5	
			Create product vision				
			Create product mission				
			Create definition of done				
5	CICD, Testing and UI design	Setup CICD and testing framework					
			Update wire draft	3		5	
			Adjust database scheme to history approach	5		5	
			Implement CICD	8		5	
			Create mid-release plan				
			Create build process video				

Sprint	Theme	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
Release							
	Total			122	49	93	16
Sprints							
1	Project kick-off	Get in touch with the team, project and AMOS		0	122	0	93
2	Project Setup	Create application architecture and setup project components		21	122	22	93
3	Application Domain Modelling	Model the application domain as well as create drafts for the UI		19	101	17	71
4	Application Domain Model Implementation & CICD architecture	Implement the first components of the application domain and prepare CICD pipeline		23	82	23	54
5	CICD, Testing and UI design	Setup CICD and testing framework		16	59	15	31
6	Mid Release	Prepare mid release and documentation documents		18	43	16	16
7	Containers & Navigation	Container list detail views shall be implemented and dynamically loaded from database		0	25	0	0
8	Containers & Navigation 2	Container list detail views shall be implemented and dynamically loaded from database		25	25	0	0
9					0		0
10					0		0
11					0		0
12					0		0
13	Final Release				0		0
14	Project Retrospective				0		0
Features							
1	Project kick-off	Get in touch with the team, project and AMOS					
			Create & agree on team contract				
			Initialize planning documents				

Sprint	Theme	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining

2	Project Setup	Create application architecture and setup project components					
			Initialize base Website	8		8	
			Initialize database	2		1	
			Initialize proxy container	3		5	
			Introduction to used technologies	8		8	
			Create software architecture description				
			Initialize software bill of materials				
3	Application Domain Modelling	Model the application domain as well as create drafts for the UI					
			Create wire draft for UI	5		8	
			Design database scheme	8		5	
			Apply database scheme to database	3		1	
			Initialize project docker-compose	3		3	
4	Application Domain Model Implementation & CI/CD architecture	Implement the first components of the application domain and prepare CI/CD pipeline					
			Create base implementation for resource information collection	5		5	
			Create base container detail page	8		8	
			Create coding guidelines	5		5	
			Decide on CI/CD architecture	5		5	
			Create product vision				
			Create product mission				
			Create definition of done				
5	CI/CD, Testing and UI design	Setup CI/CD and testing framework					
			Update wire draft	3		5	

Sprint	Theme	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
			Adjust database scheme to history approach	5		5	
			Implement CICD	8		5	
			Create mid-release plan				
			Create build process video				
6	Mid Release	Prepare mid release and documentation documents					
			Setup frontend testing	5		5	
			Create health indicator	3		3	
			Generate test data for container & pods within database	5		3	
			Create list with static data (container names)	5		5	
			Create user documentation				
			Create build & deploy documentation				
			Create technical design documentation				
7	Containers & Navigation	Container list detail views shall be implemented and dynamically loaded from database		0		0	
8	Containers & Navigation 2	Container list detail views shall be implemented and dynamically loaded from database					
			Update database schema	5			
			Track changes with watchers	8			
			Display all containers as list	5			
			Create sidebar navigation	5			
			GHA and Pre-Commit use different configs for golangcilint	2			

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
	<u>Colours match with color scheme</u>	sprint-XX-release-candidate release created and marked as pre-release	All required features are implemented
	Implementation is unit tested	New Docker images available at Docker Container Registry	User manual is ready
	Code documentation updated (jsdoc or godoc?)	Sprint Review completed	Technical manual is ready
	<u>Changes to database documented at Confluence- Database scheme</u>	Sprint Retrospective completed	No bugs
	<u>Changes to architecture documented at Confluence - Architecture</u>	Pull request to "main" branch merged & closed if there is a new release	
		Real size set for each closed user story	
	Feature has been fully implemented		
	All acceptance criteria were met		
	Product owner approved features		
	All tests are passing		
	Pull request to "develop" branch is merged & closed		
	Bill of materials is updated with new dependencies
