This site gives an overview on the design choices made for the KIT application. The application is designed to be minimalistic and easy to navigate without design choices that could confuse users.

## Design Elements

To achieve a uniform look of the application we decided to use the Flowbite UI elements for the frontend design. They provide a modern and minimalistic look for all the elements we needed to build the application, like tables, button, form field and navigation. A list of available elements can be found here:

[▶ Flowbite React - UI Component Library](#)

## Color Scheme

For the color scheme we are using the one provided by the Flowbite UI elements which makes it easy for us to add new components with out making too many decisions on the coloring. For special health bar colors we are using the following:

Color	Hex Code Text	Hex Code Background
Red	#9B1C1C	#FDE8E8

Green	#03543F	#DEF7EC
Yellow	#713B13	#FDF6B2
Grey	#1F2937	#F3F4F6
